Application Brainstorming

Who would be the customer / user ?

Why would they want this application?

What would this application provide?

What data can I find open source?

Michelin's Values

I also wanted to consider an application that aligned with Michelin's core values, I decided to go with the future of vehicles (and tires) and consider the major tire brands positioning in the electric vehicle and autonomous vehicle spaces

- Respect for the environment
- Respect for the shareholders

Application Ideas

Additional ideas considered:

- Stock ticker + sentiment analysis
- Supply chain tracker + news analysis
- Customer sentiment analysis + weather / geography layer (would require customer location, hard if not impossible to find open source)

EV & AV Positioning

Scores generated by GPT-4o-mini from scraped news, Wikipedia, and brand press releases.

 Plot

Brand Scorecards

● Michelin

Michelin is well-positioned in the tire industry as it transitions to electric and autonomous vehicles, demonstrating strong innovation in EV tire technology and forming strategic partnerships with key automotive players. While its sustainability efforts are commendable, more concrete targets could enhance its competitive edge. Overall, Michelin's proactive approach in R&D and partnerships indicates a solid commitment to future mobility.

Average score: **77.0/100**

EV Tire Innovation**85/100**

Michelin has introduced new EV-specific tires that promise to extend range by up to 37 miles, showcasing significant innovation in low rolling resistance and energy efficiency.

AV Integration**70/100**

The company has partnered with various entities, including a self-driving startup, to integrate tire technology with autonomous vehicle systems, indicating a commitment to AV integration.

Sustainability**75/100**

Michelin has made strides in sustainability, including commitments to reduce carbon emissions and utilize recycled materials, although specific targets are less detailed.

Strategic Partnerships**80/100**

Michelin has formed strategic partnerships with major automotive manufacturers like Hyundai to advance tire technologies for EVs, enhancing its position in the market.

Innovation Pipeline**75/100**

The company is actively engaged in R&D for future mobility, including new tire technologies, but specific details on patent filings or innovation labs are limited.

◆ Goodyear

● Bridgestone

● Continental

Plot

Sustainability — Brand Comparison

● Michelin

Michelin has made strides in sustainability, including commitments to reduce carbon emissions and utilize recycled materials, although specific targets are less detailed.

◆ Goodyear

Goodyear has made plans for sustainable EV tires and has shown interest in carbon reduction, but specific targets and timelines are less clear.

● Bridgestone

While Bridgestone has made strides in sustainability, specific carbon reduction targets and circular economy programs are not prominently highlighted in the available data.

● Continental

Continental has made strides in sustainability, including earning LEED Gold certification for its headquarters, but specific carbon reduction targets and circular economy programs are less detailed.

AI Analyst

Ask anything about EV/AV positioning. The agent has access to all scores, justifications, and news.

 Chatbot

Which brand is best positioned for the EV transition overall?

How does Michelin compare to Bridgestone on AV integration?

Which brand has the weakest sustainability commitment and why?

Rank all four brands by strategic partnerships score.

What are the key EV tire innovation differences between Goodyear and Continental?

Type a message...

Application Features

- KPI scores per brand
- 4 tabs: radar plot, scorecard per brand, news articles scraped as data sources, and an AI analyst
- Drill down by dimension

Dimensions

- Five dimensions: EV Tire Innovation, AV Integration, Sustainability Commitment, Strategic Partnerships, Innovation Pipeline
- Scored by GPT-4o-mini with a prompt to score each one from 0 to 100 based only on what appears in the text
- The scores are entirely GPT's interpretation of what the scraped text says about each brand
- The scores reflect media coverage and public statements more than facts

Tools and tech

- Google colab notebook - code base
- Gradio & plotly - UI and plots
- Requests, feedparser, BeautifulSoup - web scraping
- GPT-4o-mini, LangChain, LangGraph - scores and AI agent
- Claude - application design & code assistance

Application Notes

- This application is not Michelin favored
- Sourced solely by extremely limited web scraping
- Results & scores should not be considered fact but examples

Business impact

- With more thorough data, this application has the ability to demonstrate how Michelin compares to competitors in the future of electric vehicles and autonomous vehicles and provide continuous updates and alerts of new articles in the space

Next steps

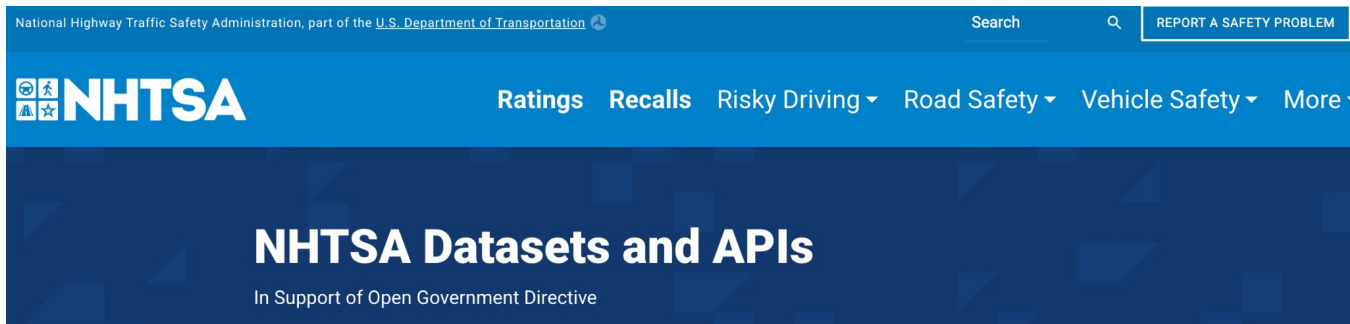

- Potentially make the “AI Agent” a RAG model
- Collect more data, not just articles
- Ensure that amount of data (esp. articles) collected per brand is equitable to eliminate GPT scores favoring brands that are more well represented
- Create alerts for competitor action within the space

Other Data Considerations

National Highway Traffic Safety Administration Datasets and APIs: No recalls until 2020-2024 dataset, no recalls in 2025!

Difficult API to use; required calling vehicles, when I tried lists of popular vehicles the quantity of data was not there

Would've liked to explore this dataset more with more time

I excited to learn more about what else is in the road ahead
for Michelin.

Thank you!
